

X. ABSTRACT OF THE DISCLOSURE.

Composition spray applied on fabrics to de-wrinkle and refresh while protecting colors which leaves no discernable residue. Quality water, one or more alcohol(s) and one or more surfactant(s) penetrate the fabric weave. One or more acids lower pH to stabilize sensitive dyes, thus ensuring color-safeness. Alcohols hasten drying and fragrances mask alcohol odor and help consumers identify the product. Mechanical action(s) by the user enhances wrinkle removal or imparts shape. Optional malodor-eliminating compounds keep fabrics fresh longer, or refresh malodorous garments. Optional specific quaternary ammonium compound reduces static cling but does not significantly increase residues. The composition de-wrinkles commercial fabrics, and clothing from casual to fine, spray applied using a pre-compression sprayer. The composition is environmentally friendly, safe for use on all types of fabrics, and safe for use at home or commercially.
